4000 M MULTI-FREQUENCY PROFILING SONAR HEAD

HIGH-PERFORMANCE DOMED PROFILING SONAR
P/N 975-21340000

Kongsberg Mesotech is recognized as a leader in single-beam scanning sonars, developing systems with the highest quality and highest resolution on the market. Our sonars are feature-packed and continuously being developed to meet the stringent requirements of the ever-changing subsea industry.

The 1171 Series of Sonar Heads have been developed to meet the requirements for deep ocean applications.

The new sonar heads have reduced size and weight while providing the high level of data quality characteristic for all Kongsberg Mesotech sonars. The Multi-Frequency design allows optimizing the profiling configuration for different applications.

The transducer is protected within an oil-filled, pressure-compensating dome. The telemetry is RS485 and RS232 compatible and is automatically sensed and configured at start up to match the telemetry link used. The sonar head operation is configured and controlled using the MS1000 Software Processor.
