

1171 SONAR

6000 M MULTI-FREQUENCY IMAGING SONAR HEAD
WITH COMPOSITE TRANSDUCER

HIGH-PERFORMANCE DOMED IMAGING SONAR P/N 975-22580000

Kongsberg Mesotech is recognized as a leader in single-beam scanning sonars, developing systems with the highest quality and highest resolution on the market. Our sonars are feature-packed and continuously being developed to meet the stringent requirements of the ever-changing subsea industry.

The 6000 m 1171 series of sonar heads has been optimized to meet the requirements of deep-ocean applications.

These sonar heads provide a high level of image quality. The wide-band composite transducer is protected within an oil-filled, pressure-compensating dome.

The multi-frequency design allows optimization of the imaging frequency for different applications. The telemetry is RS485 and RS232 compatible and is automatically sensed and configured at startup.

The sonar head is configured and controlled using the MS1000 Software.

HIGHLIGHTS

- Depth rating: 6000 m
- Robust design
- Low maintenance
- Compact
- Lightweight
- Suitable for ROV / AUV applications
